

FORMING MACHINES

CUTTING EQUIPMENT

transfluid
tube processing machines

Axial forming machines

- Unique tool engineering – Fastest possible tool changes
- Six forming stages – Minimising tool changes
- Digital displays with part number / data storage – Fastest possible and correct data entry

Rotary forming machines type SRM

- Rotary forming – Ideal for sharp edges, sealing elements and perfect surfaces
- All drives are servo-electric with CNC control – Able to form independent of tooling
- Digital displays with part number / data storage – Fast data entry

Cutting equipment and knife shearing

- Unique cutting technology guarantees sharp edge cuts even on extreme pipe geometries – Perfect method for secondary trimming and precise shearing of tubes
- Option for 3 x blades – Able to handle the most extreme cutting demands
- Cut length optimisation – Minimises scrap / waste
