

HOSE ASSET MANAGEMENT

TRACK EVERY ASSET

Abdex provides a comprehensive hose management system designed to integrate safety, compliance and traceability throughout the full lifecycle of the asset. The RFID Chip, which is located on our hoses, logs all history of the hose as part of the Abdex ecosystem. This allows for easy tracking of when your asset is due for re-test and re-inspection.

ACCESS YOUR DATA ANYWHERE

Abdex supplies you with the full asset / hose assembly data as recorded from point of manufacture. Our free mobile app allows customers to identify and view all of this information on the go. Scan the chip or enter the serial number and quickly find your record in the Abdex database. To get set up, contact our team and we will guide you through the process.

TESTING, RECERTIFICATION AND IDENTIFICATION

As part of our commitment to safety and regulation compliance, we offer a full range of pressure testing and flushing services for new assets and hoses up for re-testing. Our laser engraving also provides permanent identification of hose assemblies, ensuring accurate asset recognition and reducing the risk of misidentification in the field.

Get in touch with your local sales representative to discover how Abdex can support your assets throughout their lifecycle at sales@abdex.com.au.
